

earth2.io a **WORLD** of Business

Discover the future with earth2. The biggest futuristic investment. Recreate a virtual world, with cryptocurrencies, real estate, services, fun and games plus much, much more.

What is Earth2?

Earth 2 is a futuristic concept for a second earth; a metaverse, between virtual and physical reality in which the geolocations of the real world on a sectioned map correspond to digital virtual environments generated by users. These environments can be owned, bought, sold and in the near future deeply personalized. This is what is written on the site as a description.

In summary they have recreated the map of the earth, divided into 10X10 meters squares in real size and put up for sale. The squares can be bought and sold, and in the following phases have many possibilities of use.

Why Earth2?

Surely you are wondering why you should believe in this project. All very nice, but where are the tests? From the moment it was born, around October 2020, the E2 community has grown exponentially, the site has come to gross millions of dollars, expanding the project and the team as perhaps they themselves did not believe. Over time there have been tons of updates and fixes, you can find everything in the earth2.io site where everything is transparent and in the sunlight. If that weren't enough as proof of the real opportunity that E2 offers, just look at the increase in initial purchases, properties purchased for a few dollars now worth hundreds of dollars. Another example? Land occupied by the Statue of Liberty in New York with an actual value of \$ 1000 sold for \$ 65,000 !!!

Objective of Earth2

Behind the project there is a stellar team, to accompany the founder Shane Isaac, we can find Wolfgang Walk and Nathaniel Doldersum, these only two of the 18 people working on the project.

The goal of Shane's team is to be able to recreate a virtual life, in which you can do everything you do in "Terra1" and much more.

It would be great for everyone to be able to see the world monuments, tour megacities, play a football match, run a Formula 1 race, play poker, and find yourself in xxx situations, all this and much more from your home.

They also aim to create an entire internal economy, with the creation of cryptocurrencies, a system for depositing and withdrawing money, recreational activities and financing, recreating and creating new and existing jobs.

This is all great, don't you think?

The possibilities are many:

- Play your favorite sport, game or pastime.**
- Run on incredible tracks!**
- See breathtaking landscapes and monuments!**
- Interacting with things forbidden to minors under 18!**
- Gambling in the most beautiful casinos in the world.**
- Buy land and then build on it or resell it.**
- Buying and selling Jewels that allow you to increase resource production.**
- Build your new home anywhere in the world you want!**

These are just some of the things you can do on Earth2, so with are just some of the things you can do in our world. To get a better idea, think about everything you can do here, and now think you can do it on E2 too, but much more simply !!

Project divided into phases

The project will be divided into various phases; we are currently still in phase one, that of the purchase of land (tiles) but almost ready for phase two, that of resources. As in reality, first you buy your land, then you acquire the resources, build and use or make income. E2 will undergo the same process.

It has not been revealed, in order not to give too much info to the competitors, how many exactly will be the phases, at least three but maximum five. On the site there is a detailed explanation of everything that makes all this ever closer to realization!

The value of the tiles

The first thing that will come to your mind is "man, then I'll run to buy my house!" We've all been there! But what if I told you that that's not really big business? Try to think about the beginning, when big cities did not exist, Dubai for example was sand exactly as it was some other part of the desert that is still not built today. Do you know what the value Dubai has given today? The fact of having gathered a large population and having created all the services that a city offers, yet at the beginning Dubai was just sand and was worth nothing! In your opinion, therefore, is it more valuable to buy a piece of land (tile) lost in the world or one in a megacity?

The Megacity

In Earth2 many megacities are being created, different from real cities and in different places. It would be impossible for a matter of costs to recreate cities where the current ones are, and that is why the major megacities have been created where there are currently no cities, the same thing as before in which even in Dubai before there was only sand!

Once you enter E2 you will find yourself in front of a whole world in which there are many megacities, but one of them stands out for its size, projects, simplicity, beauty, concreteness, and an incredible increase in value.

This is State1, the megacity made by entrepreneurs who aim to create the best reality of E2.

Questa è State1, la megacity fatta da imprenditori che puntano a creare la migliore realtà di E2.
